EDUCATION

Bangalore Institute of Technology

Bachelor of Engineering in Computer Science (Data Science) - CGPA: **9.1/10.0**

2022 – 2026

Bangalore, India

EXPERIENCE

Software Development Engineer Intern

Nov 2025 – Dec 2025

Akatsuki AI Technologies

Tokyo, Japan

- Built **ML-based threat detection** engine using **DistilBERT** and **XGBoost** to identify advanced SQL Injection and NoSQL Injection attacks beyond traditional regex-based WAF solutions
- Designed high-performance **FastAPI reverse proxy** with intelligent traffic routing that dynamically forwards legitimate requests, redirects suspicious users to LLM-powered honeypot, and automatically blocks confirmed threats
- Implemented adaptive deception workflows using **Groq LLM** to generate realistic fake database responses and API endpoints that trap attackers and collect threat intelligence
- Developed **real-time security monitoring** dashboard using Next.js and MongoDB to visualize live attack patterns, threat metrics, and system performance

PROJECTS

DocSync | Groq API, Twilio, Telephony Integration, Python, FastAPI

[GitHub](#)

- Developed **AI-driven telemedicine solution** enabling **remote healthcare consultations** via phone calls, bridging the digital divide for underserved communities without smartphone access
- Architected **RESTful API** integration between **Twilio telephony** and **Groq LLM** for real-time medical consultation with **sub-2 second** response latency
- Implemented geolocation-based hospital finder using Google Maps API and automated call routing system with **93% uptime**

CustomerCompass | DistilBERT, Python, PyTorch, scikit-learn, Power BI

[GitHub](#)

- Developed **sentiment analysis** model using fine-tuned **DistilBERT** to classify customer feedback as positive, negative, neutral, or irrelevant with **91.37% accuracy** across **78,000+ comments** from gaming platforms, **Amazon**, and **Twitter**
- Built customer satisfaction prediction model using **Random Forest** and **Gradient Boosting** achieving **89% accuracy** by analyzing feedback sentiment, purchase frequency, demographics, and engagement metrics
- Created interactive **Power BI dashboards** to deliver actionable **customer insights** and **trend analysis** for **data-driven** business decisions

TECHNICAL SKILLS

Languages: C, C++, Java(oops), Python, JavaScript, TypeScript

Development/Frameworks: HTML, CSS, Node.js, Express.js, React, Bootstrap, Tailwind

Databases/Tools: SQL, PostgreSQL, MongoDB, Git

Areas of Focus: Machine Learning, Backend Systems, API Design

ACHIEVEMENTS

- Solved **400+ algorithmic and data structure problems** across coding platforms including **LeetCode** and **GeeksforGeeks**
- Selected to present research paper at **International Conference in Bangkok, Thailand**
- Secured **Top 5 position among 60 competing teams** in College Student Placement Prediction Hackathon
- Achieved **Finalist position** in **Hackman V7 2024**
